How to Download and use Google Maps App

Navigate through the Apple App Store to download the Google Maps App.

1. Find the “App Store”  icon on the homepage of the iPhone.
2. Press the “Search” button located at the bottom of the page to open the search page.
3. Type “Google Maps” in the search bar at the top and press search. The “Google Maps” app should show up on the list.
4. Press the “GET” button and the app will begin downloading.

Getting Directions to Your Destination

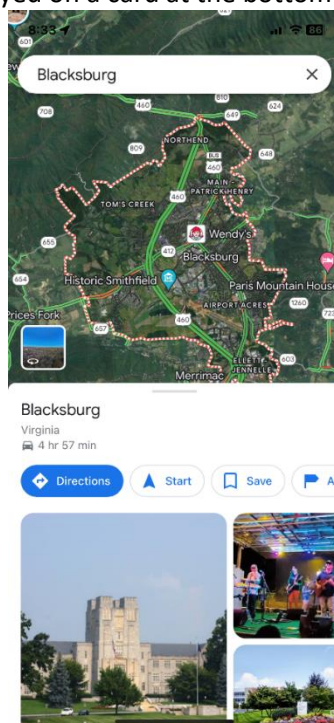

The most important thing is getting to your destination. Following these steps will allow you to properly use the Google Maps App to navigate to your correct destination.

1. Open the Google Maps app.

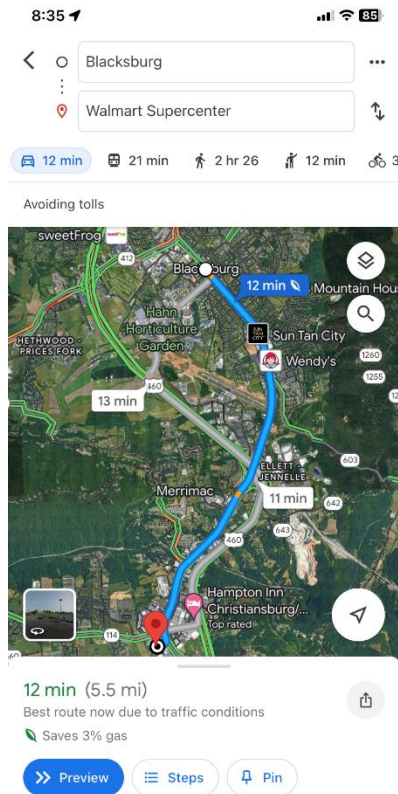

Note: When opening the “Google Maps” app for the very first time, a popup will show requesting permission to access your location while using the app.

2. Enter the location you want to visit in the search bar located at the top.
3. Press the blue search button located at the bottom.

Note: The name of the place you want to visit with the estimated travel time along with several other options will be displayed on a card at the bottom of the screen.

4. By default, Google Maps uses your current location as your beginning destination. To change the start destination, press the text bar at the top and enter the address you want.
5. Press the “Directions” button to view the path and several possible routes.

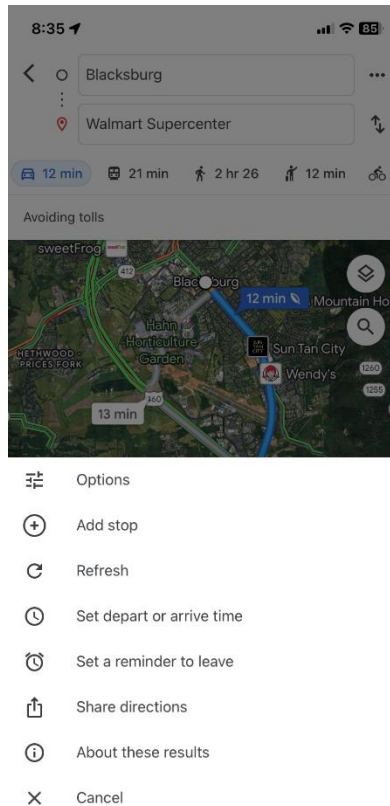

6. Select your route and press the “Start” button to begin navigation.
Note: If you are not navigating from your current location the app will say “Preview” instead.
7. Turn by turn instructions to your location will now begin.
8. Follow the instructions and drive safe.

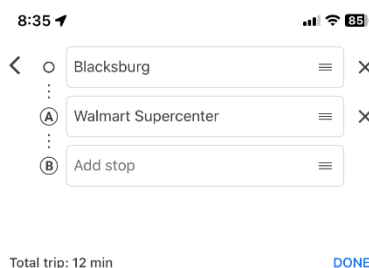

Adding More Than One Location to Your Route

The Google Maps App allows you to customize your routes and add more than one stop. This feature is great for saving time and stopping by all the other important destinations along the way.

1. Press the three dots on the screen next to your location entries.
2. From the list of options, press add stop.

3. A third text bar will show up beneath the second text bar.

4. Press done after all stops have been added and the app will create a route including the locations that were added.
